1) $\Delta x = x_2 - x_1 = 4\,mm - 18\,mm$
$= -4\,mm$
$\Delta t = t_2 - t_1 = 75 - 25 = 55$
$V_{rata\text{-}rata} = \frac{\Delta x}{\Delta t} = \frac{-4\,mm}{55} = -0{,}8\,mm/s$

2) 5 menit $= \frac{5}{60}$ jam $= \frac{1}{12}$ jam

Jarak = kecepatan × waktu
$d = 80\,km/jam \times \frac{1}{2}\,jam$

$d = \frac{80}{12}\,km = 66{,}7\,km$

3) Jarak total = 100 m + 50 m = 150 m
$\Delta t = 125 + 30\,s = 42\,s$
Perpindahan total = 100 m − 50 m = 50 m $= \frac{150\,m}{\Delta s} = 3{,}57\,m/s$
Kelajuan rata-rata = $\frac{\text{Jarak total}}{\Delta t}$

kecepatan rata-rata = $\frac{\text{perpindahan total}}{\Delta t} = \frac{50\,m}{42s} = 1{,}19\,m/s$
